TECH COIN DEVELOPMENT

I vibe coded this image

but I didn’t like it so I vibe coded it again

But it sucked still so I double vibe coded it again

it wasn’t perfect so I vibe coded it again (also known as triple vibe code)

It started to look cool but It needed some unnecessary changes so I went in for the quadruple vibe code

This one was perfect but it was missing something so for the penta vibe code I made the background some code lines which I thought was an impressive vibe code

MODELS USED: none, I did it with ai no need for human models
